"AMENDED" CLAIM SHOWING THE CHANGES IN THE CLAIM MARKED IN RED INK

- 1. A silicone rubber adhesive composition comprising the following components:
 - A. 100 parts by weight of an organopolysiloxane having an average of two or more alkenyl groups per molecule;
 - B. an organopolysiloxane having an average of two or more silicon bonded hydrogen atoms in each molecule, in an amount such that the molar ratio of silicon bonded hydrogen atoms in component B to alkenyl groups in component A is from 0.01 to 20;
 - C. From 5 to 200 parts by weight of a calcium carbonate powder selected from the group of: untreated calcium carbonate treated with an organic acid and calcium carbonate treated with an ester of an organic acid, said calcium carbonate powder having a BET specific surface area of from 5 to 50 m²/g; and
 - D. a platinum-based catalyst, in an amount sufficient to effect curing of the composition.
